

Analytical and detail-oriented Technical Support Engineer with 8+ years of experience supporting Linux and Windows environments, VMware virtualization, and enterprise systems. Skilled in troubleshooting, automation, and performance optimization to maintain high availability. Expertise in Red Hat Enterprise Linux, VMware vCenter, Active Directory, IIS/Apache web servers, PowerEdge, and databases such as MySQL and MSSQL. Proficient in scripting with Bash, PowerShell, and Python to streamline processes and improve system reliability.

Areas of Expertise

- Linux System Administration
- System Performance Optimization
- Server Provisioning & Deployment
- Ansible Configuration Management
- Infrastructure Monitoring
- Red Hat Enterprise Linux (RHEL)
- Backup & Recovery Management
- LDAP/Active Directory Integration
- Virtualization
- Containerization
- Network Configuration
- File System Management
- Bash Scripting & Automation

Professional Experience

Africa Deux Roues – Dakar, Senegal

February 2021 to June 2025

Linux Administrator (Cloud & Infrastructure Engineering)

Manage and maintain Linux environments, including RHEL, to ensure smooth operation of applications and infrastructure. Configure, deploy, and optimize virtual and physical servers while implementing RHEL 8 and 9 to meet operational requirements. Supervise and track application performance and infrastructure health using Nagios to ensure reliability and uptime. Manage and verify backup and recovery systems by performing regular tests and evaluations to safeguard data integrity. Utilize LVM, NAS, and SAN tools to manage and optimize file systems, ensuring efficient storage solutions. Evaluate and reinforce infrastructure scalability and resiliency by conducting rigorous testing and environment assessments. Support both customer-facing and internal applications to deliver consistent performance and troubleshoot issues effectively.

Key Contributions:

- Streamlined system provisioning and deployment by designing and implementing automated installation workflows using Kickstart, ensuring consistent configurations across environments.
- Leveraged Amazon Q for AI-assisted cloud engineering, including AWS infrastructure, Linux operations, and CI/CD workflows.
- Automated deployment and configuration of OpenStack infrastructure using Ansible/AWX on Ubuntu systems, ensuring standardized, secure, and repeatable provisioning.
- Applied AI-assisted development workflows (Amazon Q, Copilot-style tools) to accelerate Bash, Python, and Terraform while enforcing security best practices.
- Managed and supported Dell PowerEdge Rack/Tower servers (R640/R740 series) in enterprise data center environments.
- Built and maintained AWS-based infrastructure supporting Linux workloads, including EC2, EBS, IAM, and CloudWatch monitoring.
- Automated infrastructure provisioning and configuration using Ansible and Terraform, ensuring consistent and repeatable deployments.
- Implemented monitoring and observability using Prometheus, Grafana, and CloudWatch, leveraging AI-assisted analysis for alert tuning, root-cause identification, and system optimization..

Linux System Administrator

Developed, deployed, and configured virtual and physical servers, installing RHEL 7 to 9 on the network using both standard and advanced Kickstart techniques for OS installation and setup. Oversaw log management on Linux servers, resolving issues related to processes, crash and swap management, conducting password recovery, and fine-tuning system performance. Diagnosed and resolved hardware, software, and configuration issues on Red Hat Enterprise Linux 7 to 9 systems for system reliability and performance.

Key Contributions:

- Managed and deployed Red Hat Enterprise Linux 7/8/9, CentOS 7/8, and SUSE Linux servers, including installation, configuration, and testing in virtualized environments (VMware ESXi and Proxmox).
- Performed file system management with LVM, NAS, and SAN, and secured network protocols (TCP/IP, DHCP, DNS, NFS, CIFS) while configuring SSH key-based authentication.
- Automated infrastructure and operational tasks using Ansible, Terraform, Bash, and Python; resolved escalated issues through root cause analysis and documented solutions for team use.

Linux System Administrator

Supported and managed Red Hat Enterprise Linux (RHEL 7/8) and CentOS (7/8) systems, both virtual and physical, ensuring seamless installation, configuration, and deployment. Managed file systems, configured key services, handled containerization on RHEL 8, executed patch management, automated tasks, and ensured scalability and resiliency across diverse environments.

Key Contributions:

- *Supported and managed the installation, configuration, and deployment of virtual and physical RHEL 7/8 and CentOS 7/8 servers.*
- Supported and managed WebSphere Application Server (WAS), IBM HTTP Server, and Apache Web Server installations, configurations, and ongoing administration on Linux environments.
- *Supported enterprise IT infrastructure across physical/virtual servers, private cloud, storage, and networks, ensuring availability through monitoring, patching, upgrades, and SLA compliance.*

Education

[Master of Artificial Intelligence](#) | Indiana Wesleyan University, Indiana (2025-2026)

[Bachelor of Science in Computer Science](#) | Assane Seck University, Ziguinchor, Senegal (2014-2017)

Certifications

- Red Hat Certified System Administrator (RHCSA) : [link here](#)

Technical Proficiencies

Operating Systems: Linux (RHEL 7, 8, 9), Centos, Debian, Ubuntu, Suse, windows

Tools & Scripting: Bash, Ansible, Git, Terraform, Docker, Kubernetes/EKS, AWS, Grafana, Copilot, Prometheus

Server Management: Apache HTTPD, NGINX, LDAP, Active Directory (AD) Server, OpenStack

Networking: TCP/IP, DHCP, DNS, NTP

Storage Management: SAN, NAS, LVM, NFS, SAMBA, SFTP

Programming/Databases: Python, Java, TypeScript, MS SQL Server, MariaDB
